

codemind ecosystem

Governed, evidence-driven agentic SDLC platform built around the 'github' architecture

1 CONTEXT & INTELLIGENCE

Understand code, context, dependencies and history.

- CodeGraph Analysis**
Understand relationships, dependencies and impact across the codebase.
- KOSH Shared Memory**
Centralized knowledge store for decisions, patterns and learnings.
- Confluence Context**
Leverage documentation, decisions and updates for accurate execution.

2 ORCHESTRATION & EXECUTION

Orchestrate tasks, collaborate and drive agentic execution.

- Request Classification**
Identify and route requests to the right workflow and persona.
- Personas Involved**
Developer, QA Engineer, Security Engineer, Approver, Auditor.
- AI Agents Collaboration**
Plan, code, test and validate with specialized AI agents.

3 SECURITY, QA & QUALITY CHECKS

Security Checker

QA & Testing

Quality Enforcer

Validate security vulnerabilities, tests and code quality.

- Security Vulnerability Checker**
SAST (Checkmarx), SCA (BlackDuck) and policy compliance.
- QA & Testing**
Unit, integration, regression and coverage checks.
- Quality Gates**
Enforce standards before moving to approval.

4 APPROVAL, EVIDENCE & TRACEABILITY

Approve, document and evidence for full traceability.

- Approval Workflow**
Multi-level approvals based on policies and risk.
- Evidence Capture**
Logs, artifacts, scan result reports.
- Confluence Updates**
Reasoning, decisions and updates documented for auditability.

PERSONAS INVOLVED

Developer

QA Engineer

Security Engineer

Approver

Auditor

OUTCOME

Governed, secure, high-quality and traceable software delivery with end-to-end visibility and evidence.

Reduced Risk

Better Quality

Full Traceability

Faster Delivery
